Question 5

```
rkabir@cis106: ~
kabir@cis106:~$ exa --help
Usage:
 exa [options] [files...]
META OPTIONS
 -?, --help
                     show list of command-line options
                     show version of exa
DISPLAY OPTIONS
 -1, --oneline
                     display one entry per line
                     display extended file metadata as a table
 -l, --long
 -G, --grid
-x, --across
-R, --recurse
                     display entries as a grid (default)
                    sort the grid across, rather than downwards recurse into directories
                    recurse into directories as a tree
 -T, --tree
                     display type indicator by file names
  --colo[u]r=WHEN
                     when to use terminal colours (always, auto, never)
  --colo[u]r-scale
                     highlight levels of file sizes distinctly
  --icons
                     display icons
  --no-icons
                     don't display icons (always overrides --icons)
FILTERING AND SORTING OPTIONS
                              show hidden and 'dot' files
  -a, --all
                              list directories as files; don't list their contents
 -d, --list-dirs
 -L, --level DEPTH
                              limit the depth of recursion
                              reverse the sort order
 -s, --sort SORT FIELD
                              which field to sort by
                             list directories before other files
  --group-directories-first
 -D, --only-dirs
                              list only directories
 -I, --ignore-glob GLOBS
                              glob patterns (pipe-separated) of files to ignore
                              ignore files mentioned in '.gitignore'
  --git-ignore
                              name, Name, extension, Extension, size, type,
 Valid sort fields:
                             modified, accessed, created, inode, and none.
                             date, time, old, and new all refer to modified.
ONG VIEW OPTIONS
 -b, --binary
                       list file sizes with binary prefixes
                       list file sizes in bytes, without any prefixes
 -B, --bytes
 -g, --group
                       list each file's group
 -h, --header
                       add a header row to each column
 -H, --links
-i, --inode
                       list each file's number of hard links list each file's inode number
 -m, --modified
                       use the modified timestamp field
  -n, --numeric
                       list numeric user and group IDs
                       show number of file system blocks which timestamp field to list (modified, accessed, created)
 -t, --time FIELD
-u, --accessed
                       use the accessed timestamp field
 -U, --created
                       use the created timestamp field
 --changed
                       use the changed timestamp field
                       how to format timestamps (default, iso, long-iso, full-iso)
 --time-style
                       suppress the permissions field
  --no-permissions
                       list each file's permission in octal format
 --octal-permissions
  --no-filesize
                       suppress the filesize field
 --no-user
                       suppress the user field
  --no-time
                       suppress the time field
  --git
                       list each file's Git status, if tracked or ignored
 -@, --extended
                       list each file's extended attributes and sizes
